La position scientifique de la France dans le monde, 2000-2015 (OST)

Type: Analysis / Study

Published on: 05/04/2018

Between 2000 and 2015, the different aspects of France's scientific position remained relatively stable in a fast-changing global context.

Hcéres has published its first analysis of France's scientific position in the world. The report is based on data relating to scientific publications and on Nobel and mathematics prizes. The themes studied by the Science and Technology Observatory, a department of Hcéres, included: trends in scientific publications among the 20 biggest producers and their impact, the disciplinary profile of France and its partners in joint publications; analysis of the mathematics discipline
