Research evaluation

Research evaluation is the process of assessing the quality and impact of research projects and researchers.

It is a key component of the research funding process and is used to allocate resources to the most promising areas of research.

Research evaluation can be carried out in a number of ways, including peer review, self-evaluation, and external evaluation.

Peer review is the most common form of research evaluation and involves experts in the field assessing the quality of research proposals.

Self-evaluation involves researchers assessing the quality of their own work and is often used as a tool for professional development.

External evaluation involves independent assessors assessing the quality of research projects and is often used to inform funding decisions.

Research evaluation is a complex process and one that is constantly evolving. It is essential to ensure that the process is fair, transparent, and effective.

By using a range of evaluation methods, researchers can ensure that their work is of the highest quality and that it is funded accordingly.

Research evaluation is a key part of the research funding process and is essential to ensure that resources are allocated to the most promising areas of research.
